Introduction

MNMP iron roller rice mill based on introduction of foreign advanced milling technology, combined with the needs of users, carefully designed to optimize a new generation of products. It has the characteristic of high precision, low rice temperature, little broken rice. It is an ideal rice equipment for rice milling processing plant (80-120t/d).

Features

1. Special bearing mounting structure design, equipment installation is convenient, easy disassembly, long service life, stable operation;
2. Cantilever type milling chamber structure, remove rice sieve, sieve basket, iron roller, propeller is more convenient;
3. Steel structure screen bracket, high abrasion resistant rice sieve, rice knife, high brightness rice roll, low processing cost, performance improvement;
4. High pressure, high air volume, high negative pressure suction chaff, it is possible to process high moisture paddy;
5. Rice temperature is low, little broken rice, high precision, less rice bran powder, the bran discharging smoothly, high efficient.
